

# Get access to TTNC API

## Gaining API Access

If you're looking to integrate your systems with our API, you'll first need to generate a VKey. You can do this yourself in myTTNC by visiting the 'Applications' section found under 'My Account'.

Once on the page, click the 'Generate new VKey' button below the table. A pop up will appear containing a VKey, where you will need to enter a description as well as any IP addresses you'll be using to access the API (you can have a maximum of three IPs). Once all this information has been entered, click the 'Create VKey' button.

## Editing your VKey information

Want to change the description for a VKey? Simply click on the description in the table and make the changes you need.

If you want to add or remove IP addresses, click the edit icon in the 'Options' column. Please note that changes are made in real time.

If you have any questions or require any assistance getting set up, you can email our technical team on [support@ttnc.co.uk](mailto:support@ttnc.co.uk)
